

## WEEKLY MESSAGELINK

### ESNATECH UC LINK 8.0 ENABLES UNIFIED COMMUNICATIONS

---

Esnatech integrates its popular Enterprise Unified Communications desktop software with any operating system and SaaS based applications such as, Google® Apps and Salesforce.com.

This truly unifies business applications with a user's day-to-day live communications and collaboration. Version 8.0 of the market leading UC LINK desktop software integrates multiple operating systems and business solutions such as Skype™ VoIP/Video, Google® Talk and Apps, and Salesforce.com. The new release also launches native support for the Apple MAC operating system and both thin computing and web-based environments.

Esnatech has further integrated Presence Federation with other popular IM solutions such as Google® Talk, Microsoft® Live Messenger and Skype™ VoIP/Video. Users of the Esnatech Telephony Office-LinX™ UC platform will have their live VoIP and Video status tied into their existing office applications, allowing users to see if they are available, on the phone, or off the network. The Telephony Office-LinX bridges the status of IM, Enterprise Telephony and Groupware.

The NEW 8.0 UC LINK software changes the game for Unified Communications as it offers the largest options for deployment and compatibility with any business application and network infrastructure. The Telephony Office-LinX platform acts as the glue that seals communication devices to the enterprise applications. The new desktop software demonstrates this fact and illustrates the value of Unified Communications by extending the capability of UC into any environment.

The NEW 8.0 Desktop is available for general download under BETA Trial at: <http://www.esnatech.com/software/ucclient.htm>

UC LINK desktop software is a rich multi-operating system tool that delivers Presence, Mobility and Messaging for the Telephony Office-LinX UC platform. This Esnatech UC server is already tightly integrated with all major PBXs and VoIP services. Telephony Office-LinX provides Mobile UC services to RIM BlackBerry, Apple iPhone, Google Android, Windows Mobile and Symbian devices. It can be deployed as a standalone UC solution or as an integrated application to an existing PBX or messaging solution, such as OCTel voice mail platforms.
