

## ESNATECH PROVIDES PHONE ACCESS TO ZIMBRA E-MAIL AND CONTACTS

*Esnatech Adds support for Zimbra Collaboration server with its Telephony Office-LinX Unified Communications platform*

**Richmond Hill, Ontario, Canada December 3, 2008**—Eсна Technologies Inc. (Esnatech) a market leader in enterprise Unified Communications today announced that they have integrated the market leading Telephony Office-LinX Unified Communications server with the Zimbra Email and collaboration platform. Esnatech provides the seamless unification of telephony, mobility, messaging, and enterprise presence that enable companies to cost effectively change the way they communicate from latent inbox response to proactive real time live communication. Now they will be adding the ability for users of the Zimbra email services to access email over the phone as well as read their voicemail and recorded conversations from email and wireless email devices by embedding the market leading technology with the Zimbra email services.

Zimbra, a Yahoo company, is the leader in open source, next-generation messaging and collaboration software. The Zimbra Collaboration Suite (ZCS) 5.0 is a truly modern, innovative messaging and collaboration application. Zimbra is the leading open source solution for enterprise, service provider, education, and government environments; offering administrators and their end-users unmatched benefits. Zimbra is a popular choice for today's growing Mac and Linux email server base.

As part of its ongoing goal for interoperability and to offer the most integration in the market, Telephony Office-LinX has integrated its rich presence, advanced mobility, and unified messaging with the Zimbra collaboration platform. Users of the Telephony Office-LinX platform will have advanced presence, mobility and messaging features embedded directly within their Zimbra email. Users have access to full unified messaging, call history and desktop dialing directly from their Email as well as anywhere access to all their messages leveraging Esnatech's extensive unified messaging technology.

"Our goal is being the industry leader for Unified Communications applications and we consistently demonstrate this with our extensive reach of integration with every major email provider. Adding support for the powerful Linux based Zimbra platform enables our service provider and Linux based customers to easily add and integrate mobility, presence and unified messaging integrated directly in the applications they are currently using.", Davide Petramala VP Sales and Marketing Esna Technologies Inc. We have also extensively furthered our reach in terms of new customers we can provide Unified Communications as well as provide customers greater choice in applications to drive their corporate communications and driving business productivity." Esna is the first enterprise UC provider that recognized the growing importance of hosted services; we made it a priority to increase interoperability with value added services such as Salesforce.com, and Google Apps. The extension of Zimbra support enables even Yahoo business customers to integrate their telephony infrastructure and mobile devices with their hosted Yahoo business services."

The Esnatech Telephony Office-LinX platform is already tightly integrated with Microsoft Windows, MS Exchange, IBM Lotus Domino, Novell GroupWise, Google Apps, Research in Motion Blackberry, Nokia devices, and MS windows mobile devices. The gateway server can be administered directly from an organization's Microsoft Management Console or through Terminal Services over the web. Users can be managed through both LDAP and Active Directory and Group Policy.
